

AYUSH KUMAR GAUTAM

Backend Engineer · AI Systems & LLM Integration · Distributed Systems

+91 70524 49722 · ayushGautam.dev@gmail.com · [linkedin.com/in/ayush-js](https://www.linkedin.com/in/ayush-js) · github.com/CodekarAyush

PROFESSIONAL SUMMARY

Backend-focused software engineer with 3+ years building production-grade distributed systems, event-driven architectures, and AI-powered APIs. Experienced across the full backend lifecycle — from system design to cloud deployment — at both service-based and product companies. Deep hands-on work with NestJS, Kafka, Redis, and NX Monorepo. Actively shipping LLM/RAG integrations into real products using LangChain and OpenAI APIs.

CORE TECHNICAL SKILLS

Backend: Node.js, NestJS, Express.js, Fastify, TypeScript	Databases: PostgreSQL, MongoDB, Redis, Prisma ORM, Sequelize
AI / ML: RAG Pipelines, LangChain.js, OpenAI APIs, Vector DBs, LLM Integration	Queues & Async: Kafka, BullMQ, Redis, Event-Driven Architecture
Cloud & DevOps: Docker, AWS (EC2, S3, Lambda, ECS, RDS, IAM), OCI, Nginx, GitHub Actions, CI/CD	Architecture: Microservices, NX Monorepo, Distributed Systems, SOLID, System Design
Auth: OAuth 2.0, JWT (Access/Refresh), RBAC, Google OAuth	Frontend: React.js, Next.js, Redux Toolkit, shadcn/ui

PROFESSIONAL EXPERIENCE

LEI International Pvt. Ltd. · Software Developer Aug 2025 – Present
Regtech product company — MIS platform for ISO compliance workflows, certificate issuance and multi-role business operations.

- Architected a permission-based role engine supporting 14 distinct user roles with Super Admin-controlled dynamic role and permission management.
- Migrated legacy codebase to NX Monorepo (NestJS preset), enabling shared library reuse across 4+ modules and cutting incremental build times measurably.
- Built a centralised Audit Logging Service using event-driven NestJS — captures entity snapshots pre-mutation, giving compliance teams a full immutable change trail.
- Delivered end-to-end BA Onboarding pipeline covering multi-stage approval (BA Manager → Compliance Officer → Admin) and Certificate Revision workflows.

Stack: Node.js, NestJS, Next.js, MongoDB, NX Monorepo, Event-Driven Architecture

Esoft Technologies Pvt. Ltd. (Elynker) · Backend Developer Sep 2024 – Aug 2025
Hyperlocal service marketplace connecting local providers with customers for digital storefronts and service management.

- Designed async bulk-report pipeline (Request → BullMQ Worker → Excel → S3 → Signed URL) — offloaded heavy compute from the main thread, improving API responsiveness for report-heavy workflows.
- Integrated Apache Solr for full-text product and service search, replacing slow DB-level queries and significantly reducing search latency at scale.
- Added PostgreSQL index strategy on high-read tables after query profiling revealed slowdowns — restored read performance within SLA without schema changes.
- Owned and delivered 100+ REST API endpoints end-to-end — storefront, order tracking, service listings, and provider workflows; won Employee of the Quarter and nominated for Star Performer of the Year.

Stack: NestJS, Node.js, PostgreSQL, Sequelize, BullMQ, Redis, Apache Solr, Worker Threads

Jamtech Technologies Pvt. Ltd. · Backend Developer Aug 2023 – Aug 2024
Two concurrent products: Vex Fitness (real-time wearable analytics) and Rigmeds (healthcare e-commerce).

- Vex Fitness: Architected the full backend from scratch; integrated Terra API to sync live heartbeat and SpO2 data from Apple Watch and other wearables to a gym-owner dashboard with sub-200ms latency.
- Rigmeds: Built e-commerce backend with Razorpay payment gateway and webhook-based payment monitoring for reliable order state transitions.
- Sole backend engineer on both products — owned API design, business logic, QA, and deployment within a 3-month delivery window per product.

Stack: NestJS, Express.js, MongoDB, PostgreSQL, Prisma, Terra API, Razorpay Webhooks, Pino

Technophilic Pvt. Ltd. · Software Developer (Intern → Full-time)

Aug 2022 – Aug 2023

On-demand car service platform (GoMechanic-style) — end-to-end booking and service management.

- Built full-stack booking application — users log in, select vehicle, and book services — covering frontend (Next.js/React + Redux Toolkit) and backend (Express + TypeScript + PostgreSQL/Sequelize).
- Implemented Access/Refresh token auth, S3 file uploads with IAM policies, Sharp-based image compression, Winston structured logging, and EC2 deployment.
- Promoted from React intern to full-time MERN developer within months based on consistent delivery across production features.

Stack: Node.js, Express.js, TypeScript, Next.js, React, Redux Toolkit, PostgreSQL, Sequelize, AWS S3/EC2, Sharp

KEY PROJECTS

AI Engineering Productivity Platform

NestJS · Kafka · Redis · MongoDB · OpenAI · LangChain.js · GitHub API · Jira API · Docker · AWS · GitHub Actions

- Built Kafka-driven event pipeline ingesting GitHub push events and Jira ticket updates in real time — auto-generates commit-based ticket descriptions and logs developer time entries with session-level tracking.
- Tracks per-branch contribution breakdown (commits, time, raised PRs) and surfaces team productivity analytics across 10+ repos with percentage-level contribution breakdown.
- Implemented RAG-powered internal knowledge assistant (LangChain.js + OpenAI) answering sprint and codebase queries — reduces ad-hoc interruption load on senior engineers.
- Containerised with Docker; GitHub Actions CI/CD pipeline deploys to AWS automatically on every merge.

NX Monorepo E-Commerce Platform

NestJS · Next.js · MongoDB · Redis · BullMQ · Cloudinary · Redux Toolkit · shadcn/ui · Docker

- Full-stack e-commerce platform in an NX Monorepo — NestJS backend and Next.js frontend share type definitions and utility libraries, eliminating cross-app duplication.
- RAG-powered customer support chatbot handles product and order queries, deflecting inbound support load without human intervention.
- BullMQ-backed async notification and email batching handles high-volume sends without blocking the main API thread.

Academic Publication Platform

NestJS · PostgreSQL · Prisma · Redis · WebSockets · Razorpay · AWS S3 · OCI · Nginx · GitHub Actions

- JWT access/refresh token auth with Google OAuth; Redis session caching reduces auth overhead on repeat requests.
- Razorpay payment integration with AWS S3 signed URL expiry for premium content access — serving 1,000+ registered users.
- Deployed on OCI behind Nginx reverse proxy with SSL termination; GitHub Actions pipeline enables zero-downtime releases.

EDUCATION & ACHIEVEMENTS

B.Tech — Computer Science Engineering

SR Group of Institutions · 2023 · CGPA: 7.24

Active in technical competitions — won recognition at 2 consecutive Engineers Day events.

■ 1st Prize — Engineers Day 2021

Arduino obstacle-dodging car (ultrasonic + phone control)

■ 3rd Prize — Engineers Day 2022

IoT-based smart door locking system (Arduino)
